

CloudCare Medical – Security Controls

Access Control:

Access to company systems and sensitive information is restricted based on employee roles and responsibilities. User accounts are reviewed regularly to ensure appropriate permissions are maintained.

Password Policy:

Employees are required to use strong passwords containing uppercase letters, lowercase letters, numbers, and special characters. Passwords must be updated periodically to reduce security risks.

Multi-Factor Authentication (MFA):

Multi-factor authentication is implemented for Microsoft 365 accounts and remote access systems to provide additional protection against unauthorized access attempts.

Data Encryption:

Sensitive company and patient data is encrypted during transmission and storage to maintain confidentiality and prevent unauthorized disclosure.

Backup Policy:

Regular backups are performed for critical systems and important business data. Backup recovery testing is conducted periodically to ensure successful restoration during emergencies.

Antivirus Protection:

Endpoint protection and antivirus software are installed on company devices to detect, prevent, and respond to malware threats.

Security Awareness Training:

Employees receive cybersecurity awareness training to recognise phishing attacks, social engineering attempts, and other common cyber threats.
